

# PD-DSK-PN PD-DSK Control Panel

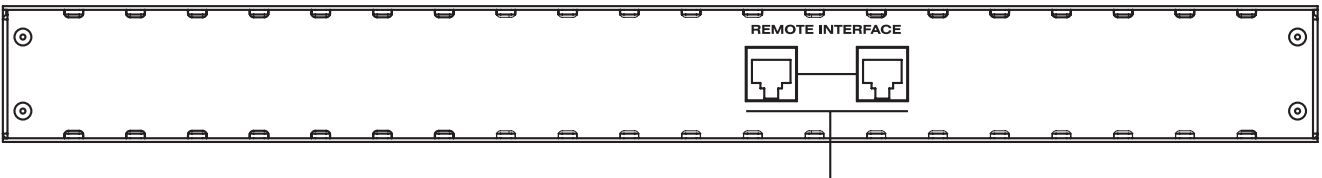

The PD-DSK-PN is a control panel designed to control the PD-DSK module. It provides access to insert the keyers to the program, to select transition type and speed, and to trigger by-pass protection. Communication with the PD-DSK module is established by using CAT-5 cable via RS-422 interface on the panel rear.

## FRONT PANEL

## BACK PANEL

2 RJ-45 connectors, one is for remote control the other is for multiple-panel expansion.
